

IRATA TRAINING (REVALIDATIONS AND REFRESHER TRAINING)

IRATA

IRATA training is the internationally approved qualification for rope access work in the offshore and onshore industries. Our approved courses combine the most engaging theory sessions with practical activities taking place in our world class rope access facility. Our course instructor, Michael Brushneen, is a highly respected and hugely experienced rope access professional with a passion for sharing his knowledge and skills with others.

Personnel attending this course are assured of the highest quality through our IRATA approval. Our Minteg courses have the added benefit that we are rope access specialists ourselves and our training delegates benefit from our real life rope access background.

Revalidations

All IRATA certification is valid for three years from the date of assessment and revalidations can be done six months prior to expiry of existing qualification without losing any time on said qualification.

Refresher Training

If rope access Technicians are not using rope access techniques regularly, they should be evaluated for competence prior to the commencement of operational duties. Refresher training in particular techniques may be required.

If rope access Technicians do not use rope access methods for a period of more than six months, they are required to undergo refresher training. The training should be appropriate for each individual and should be recorded in his or her logbook. Minteg offer refresher training at all levels.
